About

Hi, my name is Chris Porter. I graduated this year from Cardiff Metropolitan University and am currently working as a freelance designer in Brighton.

I have a passion for problem solving and story-telling, using them to tackle problems big and small. I believe in design that originates from form, insight and understanding. I am a curious and hands-on thinker; in my free time I like to build and restore bikes, up-cycle furniture and am a big DIY enthusiast.

Experience

Freelance Designer
LogoLogo
logologo.co.uk

A three-month internship during which I have worked on print and digital projects including booklets, branding, web and infographics. I have also sat in on client meetings, ran errands and made some coffee.

Whilst working here my design practice has grown to become more adept and I continue to gain invaluable experience here working as a freelance graphic designer.

Harrison & Co
harrison-agency.com

In my two weeks at Harrison and Co I had the chance to input on several projects, as well as working through a complete project from start to finish. During this project I utilised input from the other designers and the client to develop fresh visuals for a re-brand.

Spring Marketing
springmarketing.co.uk

During this placement I had the opportunity to work on the initial stages of multiple projects. I began by working with the MD and gaining an insight into marketing, client relations and account handling. Later taking those projects to the studio to work on idea generation and visuals.
